

MODULAR CONCEPT

ROLLER COVER

ROLLER COVERS

ROLLER cover systems are a possible substitute for bellow covers in very narrow spaces when only general sealing is required.

Two different types are available:

- ROLLER blind without housing - this type needs less space, best used with smaller diameters and short extensions
- ROLLER blind with housing - we recommend this type for safety reasons when longer extensions are used and especially when steel is used for the band material. They are available in many variants.

ROLLER blind cover without housing

ROLLER blind cover with steel band and housing

Drives

The ROLLER systems come with different drive concepts:

- Torsion springs TF: Drive separate to cover band
- Steel band drives SA: Cover band forms drive
- Steel band spring drive FM: Drive separate to cover band to customers specifications (see page 62)
- Electrical drive:

Torsion springs TF

Torsion springs are very well suited for a long working life performance at low loads. We recommend torsion spring drives primarily with synthetic material covers.

The torsion springs are manufactured from a high quality alloyed wire. This wire material has been proved to reach ten times the service life of a conventional wire spring.

Steel band drive SA

For higher tension forces we recommend SA steel band drives. The steel band for the outer cover also serves as a spring motor. Steel is selected for the band.

Steel band spring drive FM

Also suitable for higher tension forces are the FM steel band spring drives.

Design option	ROLLER with TF drive	ROLLER with SA drive	ROLLER with FM drive
Housing available	■	■	■
Side mount available	■		■
Link Apron available	■ (limited)		■
Outer band synthetic material	■		■
Outer band stainless steel	■ (limited)		■
Outer band normal steel		■	■
Maximum band width in mm	6,000	300	6,000*

All dimensions in mm.

* 21/28 means a roller diameter of 21 mm for regular load and 28 mm for high load. Other types and sizes on request. Square outer housing, rollo size is equivalent to outer dimension of the tube. Type without housing: first number: standard spring force/second number: enlarged spring force is required.

ROLLER COVERS

Dimensions of housings

The measurements for the ROLLER System housings must take into account the band width, length of extension and also type of drive.

Design data for calculation

For the design of the ROLLER covers the following factors should be considered:

- speed of travel
- intended total number of cycles, working life
- frequency and speed of changes in travel direction
- mounting position, direction of swarf

Operating position

The operating position can be vertical, horizontal or transverse, with an extension to the left, right, top or bottom side.

Operating position: horizontal flat

Operating position: vertical flat

Operating position: horizontal upright, e.g. for X axis covers

Pre-loading

- ROLLER systems with housing are pre-loaded at the factory to customer or HEMA specifications and are ready to install.
- ROLLER systems without housing are not pre-loaded.

Roller blind with cover band

Cover material

The outer band is subjected to a wide variety of stresses; the material chosen depends on the field of application:

- Steel bands with rounded edges (standard and stainless steel): Protection from cold and hot chips, coolants. Maximum width of steel band standard 300 mm, steel band stainless 1000 mm
- Synthetic bands, e.g. Preotex, awning cloth, Neoprene, etc., Protection from dust, coolants, contact guard
- Link aprons: Protection from large chips, coolants: Recommended for applications requiring additional lateral stability

E2-08	4	3 x 12
E2-10	4 / 6 optional	4 x 12
E2-12	6	6 x 12

Shaft for ROLLER blind without housing (optional)

Mounting

A variety of mounting positions is available. ROLLER covers with housing can be mounted at the standard positions shown in the next column.

For mounting roller covers without housing two holder types are available for easy and permanent fixing:

- Standard holder (HL)
- Heavy duty holder (HS)

Customized holders can be produced for special requirements.

Please note

ROLLER covers ordered without housing are produced with round shafts as standard.

ROLLER COVERS

Fixing the band

The band is fixed to your requirements with flat or angular steel brackets bonded or riveted to the band on one or both sides

ROLLER with bonded fixing bracket F1.1

Link Apron with fixing bracket F2.1, riveted

Variety of band fixing types

Wiper

In order to keep the case as clean as possible, we use wiper systems as a standard feature.

For special applications we offer wipers for guideways and telescopic covers and brush wipers.

Replacement

When ordering replacement rollers please quote the serial number for the ROLLER cover.

This number can be found either on the roller blind itself or

Rollo with housing and HEMA serial number on a label on the housing.

Security information

Please observe the mounting and maintenance information

Mounting and maintenance information for ROLLER supplied with each ROLLER cover.
